

List of Tables

Table-1.1	Difference between randomness and fuzziness
Table-3.1	Comparison table among the existing models with proposed model 3.3
Table-3.2	Input Values of \tilde{C}_{ijk} (in \$) under AUD
Table-3.3	Optimum result of the model
Table-4.1	Comparison table among the existing models with proposed model 4.3
Table-4.2	Unit transportation cost
Table-4.3	Input for the availability, conveyance and demand
Table-4.4	Optimum result of TSSTP
Table-4.5	Unit transportation cost (in suitable units) of TSTP
Table-4.6	Result of TSTP
Table-4.7	Sensitivity analysis
Table-5.1	Input data of fuzzy solid transportation problem
Table-5.2	Fuzzy STP with rank value
Table-5.3	Initial BFS following VAM method
Table-5.4	Optimality test of the BFS
Table-5.5	Optimal solution of FSTP using <i>Lingo</i> – 9.0
Table-5.6	Sensitivity analysis
Table-6.1	Input of distance with its fuzzy logic value
Table-6.2	Input of quality with its fuzzy logic value
Table-6.3	Input of distance and quality
Table-6.4	Output of logical value for C_{ijk} & C'_{ijk}
Table-6.5	Output of transportation amount(x_{ijk})
Table-7.1	Comparison table among the existing models with proposed model 7.3
Table-7.2	Input of source for item with its fuzzy logic value
Table-7.3	Input of demand for item with its fuzzy logic value
Table-7.4	Input of first item, the corresponding logical value of the second item
Table-7.5	Other Inputs of the model
Table-7.6	Unit transportation cost(C'_{ijk}) of the model
Table-7.7	Optimum results of model, Using MOGA
Table-7.8	Optimum results of model, Using MOGA without entropy
Table-8.1	Optimum solution of the problem 8.5.1
Table-8.2	Continuous type-2 fuzzy input of the problem 8.5.2
Table-8.3	Result of chance-constrained programming problem
Table-8.4	Result using nearest interval approximation
Table-9.1	Input data crisp time matrix
Table-9.2	The α -cuts of the objective functions
