

LIST OF TABLES

- Table 3.1 Cellular DNA & artificial sequence compression ratio and rate using Reverse & Palindrome Technique.
- Table 3.2 Cellular DNA & artificial sequence compression ratio, rate and saving percentage using Genetic Palindrome with Palindrome Technique.
- Table 3.3 % encryption and % modification on actual text
- Table 4.1 Huffman code before and after encryption
- Table 4.2 Huffman code after swapping
- Table 4.3 Huffman code before & after encryption
- Table 4.4 word frequency
- Table 4.5 word base Huffman code
- Table 4.6 Huffman code after swapping
- Table 4.7 cellular DNA sequences compression ratio, rate and gain where each column displays the result for a single algorithm and rate in bits per base for each sequence (data set-I).
- Table 4.8 cellular DNA sequences compression ratio, rate and gain where each column displays the result for a single algorithm and rate in bits per base for each sequence (data set-II).
- Table 4.9 Artificial sequences compression ratio, rate and gain where each column displays the result for a single algorithm and rate in bits per base for each sequence of data set-I.
- Table 4.10 artificial sequences compression ratio, rate and gain where each column displays the result for a single algorithm and rate in bits per base for each sequence (data set-II).
- Table 4.11 % encryption, % effect on original file and entropy change using Repeat technique
- Table 4.12 relative frequency
- Table 4.13 encryption, effect on original file & change of entropy using process-I on compressed data of data set-I
- Table 4.14 encryption & effect on original file using process-I on compressed data (Data set-II)

Table 4.15	encryption, effect on original file & entropy using process-I on library file of Data set-II
Table 4.16	encryption & effect on actual file using process-II on compressed data of data set-I
Table 4.17	encryption & effect on original file using process-II on compressed data of data set-II
Table 4.18	encryption & effect on actual file using process-II on library file of data set-II
Table 4.19	encryption & effect on original file using process-III
Table 4.20	data encryption & decryption throughput (Byte/See)
Table 4.21	improvement of Repeat & Huffman Technique over Gzip
Table 4.22	comparison our results with others standard results
Table 4.23	comparison our results with others standard results
Table 5.1	compression rate, ratio, space utilization and encryption rate of data set-1
Table 5.2	compression rate, ratio, space utilization and encryption rate of data set-2
Table 5.3	the percentage encryption ratio and percentage effect on actual text using compression technique
Table 5.4	apply encryption algorithm on source file and calculate encryption & decryption time
Table 5.5	apply encryption algorithm on compressed file and calculate encryption & decryption time
Table 5.6	apply encryption algorithm on library file and calculate encryption & decryption time
Table 5.7	throughput of the process
Table 5.8	compression rate using 2 nd pass compression technique
Table 6.1	cellular DNA sequence compression ratio and rate
Table 6.2	artificial sequence compression ratio and rate
