

List of Tables		I-III
List of Figures		IV-VI
Abbreviations		VII-IX
1. General Introduction		
1.1	Historical perspective on high altitude complications	1
1.2	Altitude air pressure and oxygen availability	2
1.3	High altitude and pathophysiology	3-6
1.4	Haematological responses	7
1.5	Kidney functions and hypoxia	7-8
1.6	Gut microbiome and kidney disease	8
Literature and Review		
1.7	GI complications at HA and indigenous gut microflora	9
1.8	Microbial distribution throughout GI tract	9
1.8.1	Microflora in upper gastrointestinal tract	10
1.8.2	Microbiota in stomach	10
1.8.3	Microbiota in small intestine (SI)	10-11
1.8.4	The large intestinal microbiota	12
1.9	Functional aspects of gut flora	12-13
1.10	Redox biology of the gastrointestinal epithelia	14-15
1.11	Probiotics	15-16
1.12	Probiotic and health benefit	16-17
1.13	Global scenario of commercial probiotics	18-21
Aims and objectives		22
Research outline		23-26
2. Materials and methods		
2.1	Animal selection and care	27
2.2	Animal grouping and exposure to hypobaric hypoxia	27-28
2.3	Selection of probiotic and feeding procedure	29

2.4	Sample collection	30-32
2.5	Human sample collection	33
2.6	Analysis of physiological indices	34
2.7	Quantification and diversity of microflora	34
2.7.1	Microbial Analysis	34
2.7.2	Growth direction index (GDI)	35
2.8	Metabolic activities of gut microflora	35
2.8.1	Measurement of gas volume	35
2.8.2	Faecal enzymes activities	35
2.8.2.1	Assay of α -amylase	35
2.8.2.2	Assay of Proteinase	36
2.8.2.3	Assay of Alkaline phosphatase	36
2.8.2.4	Assay of α -glucuronidase	36
2.8.2.5	Calculation of specific activity	36
2.9	Health profile analysis	36
2.9.1	Haematological parameter	36
2.9.1.1	Total WBC Count by haemocytometer	36-38
2.9.1.2	Total RBC Count by haemocytometer	38-39
2.9.1.3	Hemoglobin estimation by colorimetric method	39-40
2.9.2	Lipid profile	40
2.9.2.1	Blood Cholesterol level	40
2.9.2.2	Total HDL Level	41
2.9.2.3	Total triglyceride level	41
2.9.2.4	Total LDL level	41
2.9.3	Measurement of electrolytes	41
2.9.3.1	Biochemical estimation of plasma sodium, potassium and chloride	41-42
2.9.4	Toxicity study by biochemical assay of serum glutamate oxaloacetate transaminase (SGOT), serum glutamate pyruvate transaminase (SGPT) activities	42
2.9.4.1	Assay of SGOT	42-43
2.9.4.2	Assay of SGPT	43-44
2.9.5	Assessment of novel antioxidant enzymes	44
2.9.5.1	Biochemical assay of catalase activity (CAT)	44
2.9.5.2	Biochemical assay of superoxide dismutase (SOD)	45

2.9.6	Assessment of Oxidative stress markers	45
2.9.6.1	Malondialdehyde (MDA)	45-46
2.9.7	Measurement of uremic biomarkers	46
2.9.7.1	Biochemical estimation of plasma urea	46
2.9.7.2	Biochemical estimation plasma Creatinine	46-47
2.9.8	Novel biomarker for assay of kidney function test	47
2.9.8.1	Assay of urinary kidney injury molecule- 1 (KIM-1)	47-48
2.9.8.2	DNA fragmentation assay of kidney tissue	49-50
2.10	Morphometric Analysis:	50
2.10.1	Histological analysis	50-51
2.10.2	Scanning electron microscopic analysis	51
2.11	Statistical Analysis	51
3.	Results and discussion	
	Monitoring of the alteration of heamatological, biochemical, oxidative stress indicators, and changes in intestinal microflora at different altitude.	
3.1	Experiment No 3.1.- Experiment in rat model	52-67
3.2	Experiment No 3.2- Experiment in human subject	68-74
	Analysis of effectiveness of the potential probiotic supplementation for health improvement at hypobaric condition.	
3.3	Experiment No 3.3- Health profile Biochemical analysis after probiotic	75-87
3.4	Experiment No 3.4 - Study of uremic profile of rats at different altitude after supplementation of probiotic.	88-91
3.5	Experiment No 3.5- Histological analysis of kidney and liver tissue by light and scanning microscopy	92-96
	Comparative study of intestinal enzymes before and after probiotic supplementation of experimental animals at hypobaric condition.	
3.6	Experiment No. 3.6 - metabolic activities of gut after probiotic supplementation of experimental animals at hypobaric condition	97-109
	Conclusion	110
	References	111-119
	List of published paper	120
