

ACKNOWLEDGEMENT

This thesis is the culmination of my journey of Ph.D. accompanied with hardship, frustration, hope and encouragements. From the beginning of my journey, I knew that pursuing Ph.D. is a hard and challenging task. I would never have successfully accomplished this thesis without the contribution and support of many great people including my family members, well-wishers, my friends, colleagues and various institutions.

I am deeply grateful to my supervisors Dr. Prakash Karmakar and Dr. Asis Kumar Nandi sirs. Their encouragement, patience, faith and constant support for me were a pillar of strength to me. Whenever I faced any difficulties during my research work and thesis preparation, their long discussions and guidance have helped me to sort out my mistakes and plan accordingly for further work.

I am also grateful to Dr. Manoj Majee of NIPGR (National Institute of Plant Genome Research, New Delhi) for supporting me and giving me access to the research facilities in his lab and in CIF at NIPGR. I am also heartily grateful to Dr. Ananda K. Sarkar of NIPGR for his constant support, motivation, believe upon me, new research ideas and for giving me access to the *Arabidopsis* facilities in his lab.

I would like to acknowledge the basic laboratory facilities of ICGEB (International Centre for Genetic Engineering and Biotechnology, New Delhi), Dr. Neeti Sanan Mishra lab, the administrative and financial staff members of ICGEB in regard to the hosting of my WOS-A fellowship (DST).

I must acknowledge Dr. Harmeet Kaur, Dr. Pooja Verma and Dr. Nitin from Dr. Manoj Majee's lab of NIPGR for providing me a great help to work with *Arabidopsis* seeds. I am highly thankful to Dr. Archita Singh, Dr. Vibhav Gautam, Dr. Sharmila Singh, Sandeep Yadav, Pramod kumar, Vishnu Mishra, Mahima, Dr. Ashutosh Kumar and Dr. Alka Singh from Dr. Ananda K. Sarkar's lab for their throughout support and scientific discussions for better understanding. I am also thankful to Mr. Karthikeyan Mayandi from Dr. AKS lab for his help in preliminary stage of my work with seeds. I would also like to convey my thanks to all my friends and colleagues of ICGEB for their support.

Last but not least, I want to acknowledge the people who means a lot to me, my late parents for keeping faith upon me and giving me the freedom to choose the path I desired. I have a deep respect for your unconditional and selfless love, care, pain and sacrifice you did to shape my life. I could not return back their love and sacrifice for me but want to pray to the almighty to rest their beautiful soul in heavenly peace where ever they are now in this universe. Also, I want to thanks my sister Tandra, my brother-in-laws Himadri and Gouranga and my father-in-law and mother-in-law for their constant support, without which it was impossible for me to complete my thesis work.

A word of thanks is probably too little to appreciate the support I received from my husband Dr. Ananda K Sarkar. He is my best friend, philosopher and also guide. I am grateful to my husband not only because he has given up so much to make my carrier a priority in our lives, but also because of his patience, dedication, sacrifice, care for our baby to make time for me, despite of his busy schedule as a dedicated scientist. I also want to cherish my heart touching thanks to my little son Shekhar, who has been the light of my life and inspiration for the last couple of years. He has grown up watching me study and juggle with family and work. Words would never express how grateful I am to both of you. I consider myself the luckiest in the world to have such a lovely and caring family, standing beside me with their love and unconditional support, that's why I have dedicated my thesis to them.

Finally, I would like to appreciate and convey my thanks to the financial support provided by Department of Science and Technology (DST) through the fellowship Woman Scientist-A [WOS-A/LS/1276/2014(G)] to me. I feel fortunate myself to avail this prestigious fellowship during my Ph.D., also I would like to extend my thanks for the financial support I received from NIPGR through the short-term fellowship, which provided the necessary training for the research work related to my Ph.D. and WOS-A fellowship.

I sincerely apologize to all, whose names I forgot to mention here.
