

List of Figures

		Page No.
Fig. 1.1:	Elementary methodological flow chart showing the developments of landscape ecological study which is the relation among spatial patterns, historical background and ecological processes.....	20
Fig. 1.2:	The studied coast, a widespread rising coastal plain made up of sand and mud sedimented by fluvial and aeolian process at mid-eastern division of Kanthi Coastal plain, stretching between 21°36'33.07"N to 21°46'47.03"N and 87°26' 42.86" E to 87°45' 22.15" E is the part of district of Purba Medinipur, West Bengal along the Bay of Bengal coast.....	22
Fig. 1.3:	Geological structure of the study area.....	23
Fig. 1.4:	Distribution of the soil taxonomic classes.....	24
Fig. 1.5:	Micro geomorphological units of the studied coast.....	25
Fig. 2.1:	Plan shape of beach ridge cheniers of Kanthi and Digha coast (eastern bank of Subarnarekha estuary).....	30
Fig. 2.2:	Beach ridge cheniers of Kanthi and Digha coastal plain.....	31
Fig. 2.3:	High resolution Digital Elevation Model (DEM).....	32
Fig. 2.4:	The contour plan of coastal plain topography from high resolution interpolated DEM (50 cm interval).....	33
Fig. 2.5:	Various relief units of the coastal plain on the basis of elevations from the MSL.....	34
Fig. 2.6:	Erosive dune face of the beach fringed shoreline of the study area.....	37
Fig. 2.7:	Drainage network of the study area.....	38
Fig. 2.8:	The stages of evolution of the chenier costal plain (Maiti, 2013).....	40
Fig. 2.9:	The evolution of Bhagarathi-Hugli Delta fan lobes estimated by Allison et al, (2003) by lithological dating methods on the eastern fringe of the present chenier coast.....	41
Fig. 2.10:	Nine sets of chenier sand ridges on Subarnarekha deltaic surface.....	42
Fig. 2.11:	Chronological cross sections of the coastal plain topography.....	43
Fig. 2.12:	The predicted wave energy, estimated dune areas, cross sectional topographic forms and chronological formations of cross section-1 in the coastal plain of the study area.....	44
Fig. 2.13:	Estimation of relative wave parameters.....	45

Fig. 2.14:	The predicted wave energy, estimated dune areas, cross sectional topographic forms and chronological formations of cross section-2 in the coastal plain of the study area.....	46
Fig. 2.15:	The predicted wave energy, estimated dune areas, cross sectional topographic forms and chronological formations of cross section-2 in the coastal plain of the study area.....	47
Fig. 2.16:	Sector wise categorization of tidal wetlands with their inundation areas during 2017.....	49
Fig. 2.17:	Location of profile sections surveyed by GSI (2013-14).....	52
Fig. 2.18:	Volume of tidal prism estimation (m ³) in different sectors.....	53
Fig. 2.19:	The tidal wetlands occupied by commercial fish firms, abandoned tidal flat, tidal drainage channels and beach ridges or sand dunes.....	54
Fig. 2.20:	Dynamic inlet mouths modified by down drift currents and up drift currents along the shore line.....	55
Fig. 2.21:	Calculation of coastal morphometric attributes in 1 km ×1 km grid method.....	56
Fig. 2.22:	Relative relief surface of the studied coast.....	57
Fig. 2.23:	Dissected surface of the studied coast.....	58
Fig. 2.24:	Average slope of the studied coast.....	59
Fig. 2.25:	Aspect of slope direction of the studied coast.....	60
Fig. 3.1:	Sample survey grid of delineated three transects (A, B and C).....	65
Fig. 3.2:	Superimposed of transects on Sentinel image with Standard False Color Composite (FCC).....	65
Fig. 3.3:	Vegetation diversification survey in each grid along the selected three transects with the GPS tracker.....	66
Fig. 3.4:	Grid wise spatial distribution of species communities along three transects.....	67
Fig. 3.5:	Normalized Difference Vegetation Index of Boro cultivated season (November, 2017).....	68
Fig. 3.6:	Normalized Difference Vegetation Index of non cultivated season (March, 2017).....	69
Fig. 3.7:	Transect wise vegetation classification with topographic character.....	70
Fig. 3.8:	Overall scenario of vegetation types with different topographic units.....	71
Fig. 3.9:	Topographic micro zonation of coastal landforms.....	72

Fig. 3.10:	Grid wise altitudinal range of Transect A, B and C.....	72
Fig. 3.11:	Diversity of vegetation under topographic variables of ‘A’ transect.....	73
Fig. 3.12:	Diversity of vegetation under topographic variables of ‘B’ transect.....	74
Fig. 3.13:	Diversity of vegetation under topographic variables of ‘C’ transect.....	74
Fig. 3.14:	Comparative analysis of maximum diversity, Shannon diversity, and evenness of three transects.....	77
Fig. 3.15:	Showing the relationships of different floral species between AB, BC, AC and ABC transects.....	78
Fig. 3.16:	Relationships of vegetation characteristics with diverse geomorphic features.....	79
Fig. 3.17:	Superimposed layers of elevation, morphology and plant ecology for the understanding of habitat variability at local levels.....	82
Fig. 3.18:	Dendrogram from hierarchical cluster analysis with single linkage of transect-A.....	86
Fig. 3.19:	Dendrogram from hierarchical cluster analysis with single linkage of transect-B.....	86
Fig. 3.20:	Dendrogram from hierarchical cluster analysis with single linkage of transect-C.....	87
Fig. 3.21:	Icicle plot of transect-A for exhibits the similarity between two cases.....	87
Fig. 3.22:	Icicle plot of transect-B for exhibits the similarity between two cases.....	88
Fig. 3.23:	Icicle plot of transect-C for exhibits the similarity between two cases.....	88
Fig. 4.1:	Field survey location and amount of total biomass of different vegetated surface.....	97
Fig. 4.2:	Comparison between Presence of tree and Height of the tree per grid.....	97
Fig. 4.3:	Location of the agricultural sampling sites.....	101
Fig. 4.4:	Location of the sample sites of different fishery plots.....	103
Fig. 4.5:	Spatial distribution of different fisheries sector.....	105
Fig. 4.6:	Seaward extension of the open marine fishing.....	106
Fig. 4.7:	Vegetation coverage in the year of 1990.....	108
Fig. 4.8:	Vegetation coverage in the year of 2017.....	109
Fig. 4.9:	Digital classification of land use / land covers in 1990.....	110
Fig. 4.10:	Digital classification of land use / land covers in 2017.....	111
Fig. 4.11:	Changing scenario land use / land cover between 1990 and 2017.....	112

Fig. 4.12:	Validation of the LU / LC categorization area between digital and vector classification in 2017.....	115
Fig. 4.13:	Percentage of area converted in between 1990 and 2017.....	116
Fig. 4.14:	Conversion of orchards and scrub is extreme into dense vegetation between 1990 and 2017.....	116
Fig. 4.15:	Conversion of agricultural fallow land is extreme into agricultural land between 1990 and 2017.....	117
Fig. 4.16:	Conversion of fishery land is extreme into abandoned fishery and salt pan between 1990 and 2017.....	117
Fig. 4.17:	Conversion of water body and channels are extreme into open sandy tract between 1990 and 2017.....	118
Fig. 4.18:	Conversion of wetlands is extreme into abandoned fishery and saltpan between 1990 and 2017.....	118
Fig. 4.19:	Estimation the population pressure through population density at Ramnagar Blocks.....	120
Fig. 4.20:	Settlement density map of the studied coast.....	121
Fig. 4.21:	Environmental zoning map of the Ramnagar-I and II Administrative Blocks.....	123
