List of Tables

2.1 Range table used in graph neighbourhood based scheme 37
2.2 Pixel matrix used in graph neighbourhood based scheme 37
2.3 Group numbering of pixels according to their range in range table 38
2.4 Degree of neighbourhood of pixels in a pixel block 38
2.5 Selected pixels in a pixel block for a particular threshold value 38
2.6 Y component of YCbCr components of an image 39
2.7 DCT coefficient matrix of a (8×8) image block 39
2.8 Sample quantization table for Y component 39
2.9 Sample quantization table for Cb and Cr components 39
2.10 Quantized DCT coefficient matrix of Y component 40

3.1 Results of evaluation metrics using standard images for varying threshold values from 1 to 8 in SSGN 54
3.2 Comparison of SSGN with some state-of-the-art schemes in terms of PSNR (dB) when payload is 10000 bits 55
3.3 Comparison of SSGN with some state-of-the-art schemes in terms of PSNR (dB) when payload is 20000 bits 56
3.4 Results of RS analysis in SSGN 57
3.5 Comparison table of proposed scheme with existing schemes in terms of PSNR (dB) and Capacity in SSPVD 64
3.6 Table for PSNR, SSIM, and NCC of different images in SSPVD 65
3.7 Results of RS analysis in SSPVD 66
3.8 Standard deviation (SD) and correlation coefficient (CC) of cover image and stego image in SSPVD 67
3.9 Relative entropy between original image and stego image in SSPVD 68

3.10 Comparison of SSGN and SSPVD in terms of PSNR (dB) and payload (bpp) . 69
3.11 Comparison of steganalysis values of SSGN and SSPVD 69

4.1 Experimental results after embedding maximum amount of secret information in DSGN 81
4.2 Comparison of proposed scheme with existing dual image based schemes in terms of PSNR(dB) and payload(bpp) in DSGN 82
4.3 Comparison of proposed scheme with existing reversible data hiding schemes in terms of average PSNR (dB) and payload (bpp) in DSGN 82
4.4 Results of RS analysis in DSGN 82
4.5 Experimental results after embedding maximum amount of secret information in DSWM 97
4.6 Comparison of proposed scheme with existing dual image based scheme in terms of PSNR(dB) and payload(bpp) in DSWM 98
4.7 Comparison of proposed scheme with existing reversible data hiding schemes in terms of average PSNR (dB) and payload (bpp) in DSWM 98
4.8 Comparison of PSNR (dB) and capacity (bits) for different image sizes in DSWM 99
4.9 Results of RS analysis in DSWM 105
4.10 Comparison between DSGN and DSWM in terms of PSNR (dB) and payload (bpp) 107
4.11 Comparison of steganalysis values of DSGN and DSWM 107

5.1 Available coefficient for data embedding, Number of bits embedded, PSNR (dB), SSIM and Q-Index of images at different QF level in SSDCT 121
5.2 Comparison of proposed scheme with some state-of-the-art schemes in terms of PSNR (dB) in SSDCT 122
5.3 Comparison of different evaluation metrics with different benchmark image datasets in SSDCT 123
5.4 Results of RS analysis in SSDCT 123
5.5 Comparison of proposed scheme with some existing schemes in terms of PSNR (dB) and SSIM in SSDWT 133

5.6 Comparison of proposed scheme with some state-of-the-art DCT based schemes in terms of PSNR(dB) in SSDWT 134
5.7 Results of different evaluation matrices for different images in SSDWT 135
5.8 Results of RS analysis in SSDWT 135
5.9 Comparison of SSDCT and SSDWT in terms of PSNR (dB) and payload (bpp) 137
5.10 Comparison of steganalysis values of SSDCT and SSDWT 137

6.1 Application areas of the proposed schemes 147
