

<i>List of tables</i>	<i>Page</i>
3.1.1 Age distribution of the study participants, by sex	66
3.1.2 Marital status of the study participants, by sex	66
3.1.3 Educational status of the study participants, by sex	67
3.1.4 Occupation before attaining 60 years of age of the study participants, by sex	67
3.1.5 Family type of the study participants, by sex	68
3.1.6 Current working status of the study participants, by sex	68
3.1.7 Spouse status of the study participants, by sex	69
3.1.8 Total number of offspring of the study participants, by sex	69
3.1.9 Children Sharing Common house but not common kitchen with the study participants, by sex	70
3.1.10 Living arrangement of the study participants, by sex	70
3.1.11 Prevalence of pension status, by sex	71
3.1.12 Financial support received from the relatives by the study participants, by sex	71
3.1.13 Savings detail of the study participants, by sex	72
3.1.14 Regularity of financial support from relatives of the study participants, by sex	72
3.1.15 Perceived notion on health status of the study participants, by sex	73
3.1.16 Self-reported morbidity of the study participants, by sex	73
3.1.17 Methods of treatment for common ailments of the study participants, by sex	74
3.1.18 Prevalence of self-reported common mental disorders, by sex	75
3.1.19 Chronic Mental Disorders of the study participants, by sex	75
3.1.20 Prevalence of depression level (GDS-15 scale) among the study participants, by sex and age group	76
3.1.21 Prevalence of Cognitive function (MMSE scale) among the study participants, by sex and age group	78
3.1.22 Prevalence of Loneliness (UCLA loneliness scale) among the study participants, by sex and age group	81

	<i>Page</i>
3.1.23 Prevalence of Nutritional Status (MNA) among the study participants, by sex and age group	83
3.1.24 Prevalence of Activities of Daily Living (ADL) among the study participants, by sex and age group	85
3.1.25 Prevalence of Instrumental Activities of Daily Living (IADL) among the study participants, by sex and age group	86
3.1.26 Result of Chi-square test between the categories of psychosocial traits, by sex and age group	88
3.1.27 Descriptive statistics (mean & s.e.) of psychosocial and nutritional status, by sex and age group	89
3.1.28 Test of difference of obesity related variables of the study participants, between sexes	90
3.1.29 Prevalence of obesity among the study participants, by sex	91
3.1.30 Chronic disease morbidity profile of the study population, by sex	92
3.2.1 Result of adjusted multinomial logistic regression analysis using depression scale as dependent and socio-demographic variables as independent	94
3.2.2 Result of adjusted multinomial logistic regression analysis using Loneliness scale as dependent and socio-demographic variables as independent	100
3.2.3 Result of adjusted multinomial logistic regression analysis using cognitive function scale as dependent and socio-demographic variables as independent	103
3.2.4 Result of adjusted multinomial logistic regression analysis using nutritional status scale as dependent and socio-demographic variables as independent	106
3.2.5 Result of two-way ANOVA using GHQ-28 score as dependent and socio-demographic variables as independent	108
3.2.6 Result of adjusted binary logistic regression analysis using nutritional status scale as dependent and anthropometric related variables as independent among the males	109
3.2.7 Result of adjusted binary logistic regression analysis using nutritional status scale as dependent and anthropometric related variables as independent among the females	110
