

Table of Contents

<u>Content</u>	<u>Page No</u>
List of Tables -----	<i>i</i>
List of Figures-----	<i>ii-vi</i>
Abbreviations-----	<i>vii-viii</i>
Chapter 1:	
General Introduction	<i>1-29</i>
1.1 Motivation	
1.2 Phenolic Resin	
1.2.1 Synthesis of Phenolic Resin	
1.2.2 Novolac type Phenolic Resin and research rationale	
1.3 Polymers to remediate azo-dye containing wastewaters	
1.3.1 Introduction	
1.3.2 Azo dyes and their effects on environment and human health	
1.3.3 Azo dye containing wastewaters	
1.3.4 Wastewater-treatment methods	
1.3.4.1 Chemical Methods	
1.3.4.2 Biological Methods	
1.3.4.3 Physico-chemical Methods	
1.3.5 Polymeric adsorbents as effective materials for wastewater treatment	
1.3.6 Adsorption of azo dyes on polymeric materials: Literature Review	

1.4 Antimicrobial Polymer-Metal Nanoparticle Hybrids

1.4.1 Introduction

1.4.2 A general overview of metal nanoparticles

1.4.3 Antimicrobial metal nanoparticles

1.4.4 Silver nanoparticles (AgNPs) as antimicrobials

1.4.5 Polymer-silver nanoparticles hybrid as antimicrobial material

1.5 Objectives, outcomes and author's achievements

1.6 Thesis Organization

Chapter 2:

Novolac type phenolic resin-based networks for the removal of azo dyes from aqueous solutions

30-66

2.1 Introduction

2.2 Objective

2.3 Experimental Section

2.3.1 Materials and Measurements

2.3.2 Synthesis of novolac resin 2.1

2.3.3 Synthesis of novolac epoxy resin 2.2

2.3.4 Epoxy equivalent weight of novolac epoxy resin 2.2

2.3.5 Synthesis of polymer network 2.3

2.3.6 Synthesis of polymer network 2.4

2.3.7 Network swelling study

2.3.8 Porosity measurement

2.3.9 Adsorption study

2.3.10 Desorption and reusability study

2.4 Results and discussion

2.4.1 Synthesis and characterization of novolac-based networks

2.4.2 Azo dye adsorption studies

2.4.4 Importance of the work

2.5 Conclusion

2.6 Further scope of work

Chapter 3:

**Iron(III) loaded novolac-based networks for the removal
of azo dyes from aqueous solutions** **67-85**

3.1 Introduction

3.2 Objective

3.3 Experimental Section

3.3.1 Materials and Measurements

3.3.2 Synthesis of iron(III) loaded novolac-based networks

3.3.3 Adsorption experiments

3.3.4 Desorption and reusability study

3.4 Results and discussion

3.4.1 Synthesis and characterization

3.4.2 Azo dye adsorption studies

3.4.3 Desorption and reusability study

3.4.4 Adsorption – Desorption Mechanism

3.4.5 Importance of the work.

3.5 Conclusion

3.6 Further scope of work

Chapter 4:

Novolac resin-based network with aminopyridine units for the removal of azo dyes from aqueous solutions

86-114

4.1 Introduction

4.2 Objective

4.3 Experimental Section

4.3.1 Materials and Measurements

4.3.2 Synthesis of novolac resin 2.1

4.3.3 Synthesis of novolac epoxy resin 2.2

4.3.4 Synthesis of novolac-based network 4.1

4.3.5 Network swelling study

4.3.6 Adsorption experiments

4.3.7 Desorption and reusability study

4.4 Results and discussion

4.4.1 Synthesis and characterization

4.4.2 Azo dye adsorption studies

4.4.3 Desorption and reusability study

4.4.4 Adsorption-Desorption Mechanism

4.4.5 Comparison of adsorption performance

4.5 Conclusion

4.6 Further scope of work

Chapter 5:

Functionalized novolac-based polymer- silver nanoparticles hybrid:An effective antibacterial material *115-131*

5.1 Introduction

5.2 Objective

5.3 Experimental Section

5.3.1 Materials and Measurements

5.3.2 Synthesis of functionalized novolac resin 5.1

5.3.3 Preparation of functionized novolac resin-silver nanoparticles hybrid

5.3.4 Antimicrobial assay

5.3.5 Cytoplasmic material release assay

5.4 Results and discussion

5.4.1 Synthesis and characterization of functionized novolac resin

5.4.2 Characterization of functionalized novolac resin-AgNPs hybrid

5.4.3 Antibacterial Assay

5.5 Conclusion

5.6 Further scope of work

Chapter 6:

Conclusion *132-135*

Summary: *136-138*

Bibliography: *139-150*

Appendix: List of Publication *151*
