

## List of Tables

**Table 1.1:** Advantages and disadvantages of chemical oxidation methods of dye removal

**Table 1.2:** Advantages and disadvantages of biological methods of dye removal

**Table 1.3:** Advantages and drawbacks of physico-chemical methods of dye removal

**Table 2.1:** Thermal properties (TG/DTG) of **2.3** and **2.4**.

**Table 2.2:** Network parameters of **2.3** and **2.4**.

**Table 2.3:** BET parameters of **2.3** and **2.4**.

**Table 2.4.** Characteristics of azo dye adsorbates used in adsorption study

**Table 2.5:** Freundlich Constants of the adsorption isotherms for representative azodyes (MO, OII and OG) onto **2.3** and **2.4** at different pH values at 25°C

**Table 3.1** Thermal properties (TGA) of **3.1** and **3.2**

**Table 3.2** Freundlich fitting parameters in MO and OG adsorption isotherms for the studied samples at pH 7.20.

**Table 4.1.** Thermal properties (TGA) of **4.1**

**Table 4.2** BET parameters of **4.1**

**Table 4.3** Adsorption isotherm parameters of Freundlich model for MO, OII and OG sorptions onto **4.1** at 298 K.

**Table 4.4** Comparison of the equilibrium adsorption capacity of **4.1** with different adsorbents for some azo dyes at room temperature.

**Table 5.1.** Thermal (TGA) properties of **5.1**

**Table 5.2.** MIC values (  $\mu\text{L}$  ) of **5.1** and **5.3** with AgNPs loading amount (  $\mu\text{g}$  )
