1	Introduction	10
1.1	Nano Science, Nano Technology and Nano Materials: New Era of Science	11
1.1.1	Nano Technology	11
1.1.2	Nano Science:	12
1.1.3	Nano Materials:	13
1.2	Classification of Nano Materials:	15
1.3	Different Types of Nano Materials:	15
1.3.1	Fractals:	15
1.3.2	Porous Materials:	16
1.3.3	Zeolites:	19
1.3.4	Self Assembly Passivated Nanocrystals Superlattices: .	19
1.3.5	Micelles:	20
1.3.6	Self Assembled Mono Layers (<i>SAM</i>):	21
1.3.7	<i>NC</i> (Nano Crystal) Core/Shell Structures:	21
1.3.8	Nature's Nanoparticle Factories:	22
1.3.9	Metal Based Nano Materials:	23

1.3.10	Polymer Based Nano Materials:	25
1.4	World of 2D materials:	29
1.4.1	Graphene:	31
1.4.2	Why Graphene is so special?	35
1.5	2D Material Beyond Graphene:	36
1.5.1	Transition Metal Dichalcogenide (TMDCs):	36
1.6	Some application of Graphene and MoS₂ based nano composite materials:	39
1.6.1	Removal of pollutant by Photo Catalysis:	39
1.6.2	Photocurrent generation:	46
1.7	Frame work of my thesis:	52
2	Reduced Graphene Oxide – Zinc Sulfide (<i>RGO</i> – <i>ZnS</i>) Composite for Solar Light Responsive Photo Current Generation and Photocatalytic 4-Nitrophenol Reduction	57
2.1	Introduction	58
2.2	Experimental Section	61
2.2.1	Materials Used	61
2.2.2	Materials Synthesis	62
2.3	Materials Characterisation	64
2.3.1	Photocurrent generation in <i>RGO</i> – <i>ZnS</i> thin film device	65
2.3.2	Photocatalytic reduction of 4 – <i>NP</i> in presence of <i>RGO</i> – <i>ZnS</i>	66
2.4	Results and Discussion	66

2.5	Conclusions	83
3	Solar Light Responsive Photocatalytic Degradation of Tetracycline by Reduced Graphene Oxide-Cadmium Sulfide (<i>RGO – CdS</i>) Nanocomposite and its Large Area Thin Film Optoelectronic Device Application.	85
3.1	Introduction	86
3.2	Experimental Section	89
3.2.1	Materials Used	89
3.2.2	Materials Preparation:	89
3.3	Charaterisation:	90
3.4	Result and Discussion	91
3.5	Applications	95
3.5.1	Photocatalytic Degradation of Tetracycline:	95
3.5.2	Opto-Electronic Application:	98
3.6	Conclusion	100
4	Photocurrent Generation in Reduced Graphene Oxide-Cadmium Zinc Sulfide (<i>RGO – Cd_{0.5}Zn_{0.5}S</i>) Nanocomposite and its Photocatalytic Performance towards <i>PNP</i> Degradation.	102
4.1	Introduction	103
4.2	Experimental Section	105
4.2.1	Materials Used	105
4.2.2	Materials Preparation	106
4.3	Material characterization	108
4.4	Device Fabrication and Opto-electrical Transport Measurement	108

4.5	Result and discussion	109
4.6	Photocurrent generation	114
4.7	Photocatalytic activity	117
4.8	Conclusion	120
5	The Sonochemical Functionalization of MoS_2 by Zinc Phthalocyanine and its Visible Light Induced Photocatalytic Activity.	121
5.1	Introduction	122
5.2	Experimental Section	125
5.2.1	Materials Used	125
5.2.2	Material Preparation	126
5.3	Material Characterisation	129
5.4	Evaluation of Photo Catalytic Reduction of 4 – NP	130
5.5	Result and Discussion	130
5.5.1	Structure and Morphology Study	130
5.5.2	Optical Absorption Study	132
5.5.3	Steady State Photoluminescence and Lifetime Study	134
5.5.4	FTIR and Raman Study	138
5.6	Photocatalytic Activity of MoS_2 – $ZnTTBPc$ Composite	141
5.7	Conclusion	149
6	Final Conclusion & Future Working Proposa	150
6.1	Final Conclusion:	151
6.2	Future Working Proposal:	155
