

List of Figures

1. Page 30 : Selection of genes based on filters in Ensembl Biomart database
2. Page 31: Search result of *Saccharomyces cerevisiae* genes listed in Ensembl Biomart database based on filters
3. Page 32 : Metadata view of gene length data along with essentiality loaded in Rapidminer
4. Page 36 : Metadata view of disorderness length and percentage of disorderness of proteins along with essentiality loaded in Rapidminer
5. Page 38: Obtaining strand position data for genes from Ensembl Biomart server
6. Page 39: Metadata view of strand location along with essentiality loaded in Rapidminer
7. Page 39: Metadata view of protein abundance along with essentiality loaded in Rapidminer
8. Page 44: Distribution of protein abundance values for the essential and non-essential genes considered in this study
8. Page 45: Metadata view of expression level of genes along with essentiality loaded in Rapidminer
9. Page 46: Distribution of gene expression level values between essential and non-essential genes
10. Page 57: Metadata view of rare codon usage Fec values along with essentiality loaded in Rapidminer
11. Page 57 : Distribution of Fec values for essential and non- essential genes
12. Page 60: Metadata view of complex number of proteins along with corresponding essential and non-essential genes loaded in Rapidminer
13. Page 60: The distribution of complex number data with respect to essentiality
14. Page 61: Listing view of essential genes of *S. cerevisiae* in DEG

15. Page 65: Setting of the role of the ID and few other regular attributes in Rapidminer
16. Page 66: Setting of roles as label and few other regular attributes in Rapidminer
17. Page 82: Lift chart showing the efficiency of the predictability of the model
