

## List of Figures

<i>Sl. NO.</i>	<i>TITLE</i>	<i>PAGE NO.</i>
1	Line diagram showing monthly variations of Air-temperature during the study period	40
2	Line diagram showing monthly variations of water temperature during the study period	41
3	Line diagram showing monthly variations of p <sup>H</sup> during the study period	41
4	Line diagram showing monthly variations of transparency during the study period	42
5	Line diagram showing monthly variations of salinity during the study period	43
6	Line diagram showing monthly variations of dissolved oxygen during the study period	43
7	Line diagram showing monthly variations of free CO <sub>2</sub> during the study period	44
8	Line diagram showing monthly variations of alkalinity during the study period	45
9	Line diagram showing monthly variations of dissolved total hardness during the study period	45
10	Line diagram showing monthly variations of electrical conductivity during the study period	46
11	Line diagram showing monthly variations of chloride during the study period	46
12	Line diagram showing monthly variations of phosphate during the study period	47
13	Line diagram showing monthly variations of total inorganic nitrogen during the study period	48
14	Line diagram showing monthly variations of calcium during the study period	48
15	Line diagram showing monthly variations of magnesium during the study period	49
16	Line diagram showing monthly variations of water level during the study period	50

17	Line diagram showing monthly variations of photic depth during the study period	50
18 & 19	Line diagram showing monthly variations of Zooplankton density in 1 <sup>st</sup> and 2 <sup>nd</sup> annual cycles	61
20 & 21	Pie diagram showing percentage contribution of zooplankton population in 1 <sup>st</sup> and 2 <sup>nd</sup> annual cycles	62
22 & 23	Line diagram showing monthly variations of phytoplankton density in 1 <sup>st</sup> and 2 <sup>nd</sup> annual cycles	72
24 & 25	Pie diagram showing percentage contribution of phytoplanktonic population in 1 <sup>st</sup> and 2 <sup>nd</sup> annual cycles	73
26	Graphical representation showing comparison of Simpson dominance index of plankton of two annual cycles	80
27	Graphical representation showing comparison of Shannon diversity index of plankton of two annual cycles	81
28	Graphical representation showing comparison of dominance index of plankton of two annual cycles	82
29	Graphical representation showing comparison of species richness of plankton of two annual cycles	83
30 to 33	Representation showing graphical gastroscopic index (GaSI), gonadosomatic index (GSI), hepatosomatic index (HSI) and condition factor (K) of <i>Heteropneustes fossilis</i> (two annual cycles)	101-104
34 to 37	Representation showing graphical gastroscopic index (GaSI), gonadosomatic index (GSI), hepatosomatic index (HSI) and condition factor (K) of <i>Clarias batrachus</i> (two annual cycles)	118-121
38 to 41	Representation showing graphical gastroscopic index (GaSI), gonadosomatic index (GSI), hepatosomatic index (HSI) and condition factor (K) of <i>Anabas testudineus</i> (two annual cycles)	133-136
42 & 43	Percentage contribution of muscle protein of <i>Heteropneustes fossilis</i> , <i>Clarias batrachus</i> and <i>Anabas testudineus</i> (Adult & young and male & female) in 1 <sup>st</sup> and 2 <sup>nd</sup> annual cycles	158 & 160
44 to 46	Graphical representation showing mean protein in <i>Heteropneustes fossilis</i> , <i>Clarias batrachus</i> and <i>Anabas testudineus</i> of two annual cycles	162-164

## List of Photo Plate

<i>PLATE NO.</i>	<i>TITLE</i>	<i>PAGE NO.</i>
I	Open view of the culture pond	25
II	Field work and laboratory work of water analysis	26
III	Microscope and plankton identification in laboratory	55
IV	Few zooplankton of cultural ponds water	59
V	Few phytoplankton of cultural ponds water	70
VI	Anatomical organs of <i>Heteropneustes fossilis</i> , testis, liver, stomach and ovary	92
VII	Anatomical organs of <i>Clarias batrachus</i> , ovary, testis, liver, and stomach	93
VIII	Anatomical organs of testis, liver, ovary and stomach of <i>Anabas testudineus</i>	94
IX	Estimation of muscle protein by Kjeldahl method shows three steps, digestion, distillation and titration	150-151
