

List of tables

Sl no.	Title of the table	Page no.
5.1.	Consequence of NAC in antagonizing sodium arsenite derived MDA plus CD level on hepatic and reproductive tissues via duration dependent mode.	52
5.2.	Effect of NAC with respect to arsenic provoked comet formation.	63
6.1.	Effect of different doses of NAC on body growth, water consumption and reproductive organs.	67
6.2.	Effect of NAC with both the dosages with respect to arsenic provoked comet formation i.e. dominated by lengthy tail formation, diminished quantity of ovarian antral follicles with advanced level of follicular atresia and lessened uterine tissue layers.	78
7.1.	Outcome of pre-treatment of NAC on whole body masses, organ's weight and water consumption in sodium arsenite challenged rats.	82
7.2.	Showing the preventive effect of pre-treatment of NAC on comet formation, follicular quantity in ovary and breadth of uterine layers.	93
8.1.	Represents the differences of body mass alteration, weight changes of reproductive organs and mean water consumption among the group.	97
8.2.	Remedial effect of DMSA, NAC separately and their additive effect on comet number, tail length and ovarian follicular quantity and breadth of uterine layers with respect to arsenication.	106

9.1.	Diet composition and nutrient analysis of the rats' diet (per 100 gm) according to Gopalan et al., 1989 (Nutrient Value of Indian Foods).	114
9.2.	The significance of dietary post-supplementation of NAC on body growth, utero-ovarian weight and water and food consumption.	115
9.3.	The curative effect of dietary NAC post-supplementation on quantity of comet cell, width of comet tail, ovarian follicles and diameter of different layers of uterus.	123
